

Yarra Consortium User Manual

Role-based operating guide with workflows, permissions, and user stories

Prepared for Super Admins, School Admins, Teachers, Students, Vendor Applicants, and Approved Vendors.

How to use this manual

Use this PDF as the working reference for the Yarra platform. Each module includes purpose, role access, workflow, user stories, and acceptance expectations.

The live app also includes an in-product Tutorial button. The tutorial is role-aware and follows the same approval rules described here.

Table of Contents

- 1 1. Role Access Matrix
- 2 2. Role-Based User Stories
- 3 3. Module Manuals
- 4 4. Key Operating Lifecycles
- 5 5. Administration Checklist

1. Role Access Matrix

Module	Super Admin	School Admin	Teacher	Student	Vendor Applicant	Approved Vendor
Dashboard	Full	School view	Limited	Limited	No	Vendor view
User management	Full	School users	No	No	No	No
School onboarding	Full	No	No	No	No	No
School dashboard	Full	Own school	No	No	No	No
Payments & invoices	Full	Own school	No	No	No	No
Events	Full	Create/manage	Create/join	Join/view	No	No
Exchange programs	Full	Create/manage	Create/join	View/join	No	No
Content library	Create/manage	Create/manage	View only	View only	No	No
Vendor sign-up	Review context	No	No	No	Apply only	Profile context
Vendor marketplace	Approve/manage	Request/pay	Request/view	No	No	Products/orders
School network	View	View	View	View	No	No

2. Role-Based User Stories

Super Admin

- Onboard a school, collect membership payment, and activate the School Admin.
- Review pending vendor applications and approve qualified vendors.
- Approve vendor products before schools can request them.
- Create or edit events and remove events safely when cancelled.
- Verify exchange requests before they open to other schools.
- Create content library posts for all allowed school audiences.
- Monitor payments, invoices, requests, and platform metrics.

School Admin

- Manage school users with staff/student templates.
- Review own school dashboard and payment history.
- Create school events and manage registrations.
- Create exchange requests and coordinate matched exchanges.
- Create content library posts for school communities.
- Request vendor products, approve quotes, send payment links, and track delivery.

Teacher

- View dashboard, events, exchanges, content library, vendors, and school network where permitted.
- Create or participate in events and exchanges according to school workflow.
- Browse content resources without creating or commenting.
- Use marketplace visibility only for school-related product request context where enabled.

Student

- View safe dashboard information, events, exchanges, content, and school network.
- Access age-appropriate content only.
- Stay blocked from vendor marketplace and purchasing workflows.

Vendor Applicant

- Open Vendor sign-up from the login page.
- Submit company, category, contact, and offer.
- Remain on sign-up page while waiting for Super Admin approval.

Approved Vendor

- Access vendor dashboard and marketplace after approval.
- Add products for Super Admin approval.
- View requests for own products only.
- Message schools, move RFQs to Quote Sent, and deliver after payment is confirmed.

3. Module Manuals

1. Login, Roles, Sessions, and Tutorial

Purpose: Give each user a role-specific workspace and a guided tour of the modules they can access.

Roles: All signed-in users. Vendor applicants have a restricted sign-up-only experience.

Workflow

- 1 User selects a role and signs in with the invited account.
- 2 The platform stores a session and filters navigation by role.
- 3 User can open Tutorial to see only the modules available to that role.
- 4 User can open Manual to download this PDF.
- 5 User logs out to clear the session.

User Stories

- As a Super Admin, I want to switch between platform modules so that I can operate the consortium from one console.
- As a School Admin, I want only my school modules so that I do not see other schools' private operations.
- As a Vendor Applicant, I want to see only the application page so that I know approval is required before marketplace access.

Acceptance Expectations

- Navigation hides unavailable modules.
- Tutorial text matches the user's role and approval state.
- Vendor applicants cannot open dashboard or marketplace before approval.

2. Dashboard

Purpose: Show high-level metrics and recent activity for the user's permitted area.

Roles: Super Admin, School Admin, Teacher, Student, Approved Vendor.

Workflow

- 1 User opens Dashboard after login.
- 2 Metrics render from the current platform state.
- 3 Role restrictions filter schools, payments, users, vendor data, and content.
- 4 User moves into the next relevant module from the sidebar.

User Stories

- As a Super Admin, I want total schools, vendors, events, students, and revenue so that I can monitor the platform.
- As a School Admin, I want my school overview so that I can plan follow-up work.
- As a Vendor, I want vendor-specific metrics so that I can track marketplace activity after approval.

Acceptance Expectations

- Metrics do not leak restricted data across roles.
- Vendor applicant does not receive dashboard access.

3. User Management

Purpose: Manage school users, staff, and student roster uploads using downloadable Excel templates.

Roles: Super Admin and School Admin.

Workflow

- 1 User opens User management.
- 2 User downloads Student Database or Staff Database template.
- 3 User fills the template on their own computer.
- 4 User validates the upload before committing users.
- 5 Valid rows are committed and upload history is shown.

User Stories

- As a School Admin, I want to download a student database template so that I can prepare a clean roster.
- As a School Admin, I want validation errors before commit so that bad rows do not create broken accounts.
- As a Super Admin, I want to support school user imports so that schools can onboard quickly.

Acceptance Expectations

- Templates download through the browser to the user's own Downloads folder.
- Students do not receive vendor marketplace access.
- Upload history records the activity.

4. School Onboarding

Purpose: Create member schools and start membership activation.

Roles: Super Admin.

Workflow

- 1 Super Admin enters school name, board, type, billing email, and membership amount.
- 2 System creates a payment request or records payment status.
- 3 School Admin invite is associated with the billing email.
- 4 After payment is confirmed, the school becomes active.

User Stories

- As a Super Admin, I want to onboard a new school with a billing email so that the school admin can later sign in.
- As a Super Admin, I want payment status tied to onboarding so that unpaid schools are not accidentally activated.

Acceptance Expectations

- School Admin login is tied to the created school.
- Payment pending and active states are visible.

5. School Dashboard

Purpose: Show school membership, invoices, events, and key school information.

Roles: Super Admin and School Admin.

Workflow

- 1 User opens School dashboard.
- 2 School Admin sees their own school only.
- 3 Super Admin can review platform schools.
- 4 Membership and invoice information is displayed for follow-up.

User Stories

- As a School Admin, I want my membership and invoices in one place so that I can track renewal/payment status.
- As a Super Admin, I want to inspect a school summary so that I can support that member school.

Acceptance Expectations

- School Admin data is scoped to their school.
- Profile pages removed from navigation do not appear.

6. Payments and Invoices

Purpose: Record payments and review payment history for schools and marketplace transactions.

Roles: Super Admin and School Admin.

Workflow

- 1 User opens Payments & invoices.
- 2 User reviews payment records, invoice numbers, method, amount, and status.
- 3 Authorized user records offline/manual payment when needed.
- 4 Vendor marketplace payments are added after Razorpay payment confirmation.

User Stories

- As a Super Admin, I want payment records across the platform so that finance can reconcile activity.
- As a School Admin, I want my school's payments so that I can verify paid and pending items.

Acceptance Expectations

- Payments are role-filtered.
- Vendor marketplace payment becomes Paid only after Razorpay confirmation or approved manual action.

7. Events

Purpose: Create, publish, register for, edit, and delete consortium events.

Roles: Super Admin, School Admin, Teacher, Student.

Workflow

- 1 Authorized user creates an event with format, host, capacity, date, and optional paid entry.

- 2 Users register or review event information according to role.
- 3 Super Admin and the hosting School Admin can edit or delete events they manage.
- 4 Deleting an event also clears linked registrations/payments.

User Stories

- As a School Admin, I want to create an event so that other members can join.
- As a Teacher, I want to register for a workshop so that I can participate.
- As a Student, I want to see safe student-accessible events so that I can join appropriate programs.

Acceptance Expectations

- Edit/delete permissions exist for Super Admin and event owner school.
- Deleted events do not leave orphan registration records.

8. Exchange Programs

Purpose: Run cross-school teacher/student exchanges from request to completion.

Roles: Super Admin, School Admin, Teacher, Student.

Workflow

- 1 School creates an exchange request with type, subject, grade, duration, objective, dates, capacity, and mode.
- 2 Yarra/Super Admin verifies the request.
- 3 Other schools apply or review the exchange.
- 4 Schools approve the match.
- 5 Matched schools coordinate through in-platform messages.
- 6 Exchange moves through Ongoing, Completed, and Feedback Submitted.

User Stories

- As a School Admin, I want to create an exchange request so that another school can participate.
- As a Teacher, I want to coordinate messages after matching so that the exchange can run smoothly.
- As a Super Admin, I want to verify exchanges before they open so that requests are safe and suitable.

Acceptance Expectations

- Statuses follow Draft, Pending Yarra Approval, Open, Applied, School Review, Matched, Ongoing, Completed, Feedback Submitted.
- Parent consent and Scheduled steps are removed.
- Messages are visible only to matched/authorized schools and Super Admin.

9. Content Library

Purpose: Share member learning content such as posts, stories, workshops, webinars, podcasts, videos, and articles.

Roles: Super Admin, School Admin, Teacher, Student.

Workflow

- 1 Super Admin or School Admin creates content.

- 2 Content is tagged by type, audience, speaker, age range, and media/recording link.
- 3 Teachers and students browse/search/filter content.
- 4 Non-admin roles view content only; they cannot create posts or comments.

User Stories

- As a School Admin, I want to post a workshop recording so that my school community can view it.
- As a Teacher, I want to filter webinars and articles so that I can find relevant resources.
- As a Student, I want age-appropriate content so that I only see suitable material.

Acceptance Expectations

- Only Super Admin and School Admin can create/edit content.
- Vendors cannot see the content library.
- Teachers and students cannot comment or create posts.

10. Vendor Sign-up

Purpose: Collect vendor applications and keep applicants restricted until approval.

Roles: Vendor Applicant and Super Admin.

Workflow

- 1 New vendor clicks Vendor sign-up information on the login page.
- 2 System opens only the Vendor sign-up page.
- 3 Vendor submits company, category, contact email, and offer.
- 4 Application is stored as Pending approval.
- 5 Super Admin reviews the vendor in Vendor marketplace and approves or leaves pending.

User Stories

- As a Vendor Applicant, I want a simple application screen so that I know exactly what to submit.
- As a Super Admin, I want pending vendor applications visible for review so that only approved vendors get access.

Acceptance Expectations

- Pending vendor sees only Vendor sign-up.
- Pending vendor cannot add products.
- Approval activates vendor access.

11. Vendor Marketplace

Purpose: Let approved vendors list products and schools request, approve, pay, track, and close purchases.

Roles: Super Admin, School Admin, Teacher, Approved Vendor.

Workflow

- 1 Approved vendor adds a product.
- 2 Product is Pending approval until Super Admin approves it.
- 3 School Admin or authorized school user requests the product.

- 4 Vendor moves request from RFQ Submitted to Quote Sent.
- 5 School approves quote and sends Razorpay payment link.
- 6 After payment, Check payment confirms the link with Razorpay and moves request to Paid.
- 7 Vendor moves paid request to Delivered; school/admin closes after delivery.

User Stories

- As an Approved Vendor, I want to add products so that schools can request them after approval.
- As a Super Admin, I want to approve vendor products before listing so that marketplace quality is controlled.
- As a School Admin, I want to request a product, approve the quote, send payment, and track delivery.
- As a Vendor, I want to see requests for my products only so that I can respond to the right schools.

Acceptance Expectations

- Only one demo vendor/product may be used for simple demos when desired.
- Students do not have vendor marketplace access.
- Razorpay payment links are emailed to the configured recipient during testing.
- Request flow supports RFQ Submitted, Quote Sent, Approved by School, Paid, Delivered, Closed.

12. School Network

Purpose: Show a member-school directory for browsing schools in the consortium.

Roles: Super Admin, School Admin, Teacher, Student.

Workflow

- 1 User opens School network.
- 2 User reviews school cards with board, city, type, and highlights.
- 3 User uses school context for collaboration planning.

User Stories

- As a Teacher, I want to browse member schools so that I can identify collaboration opportunities.
- As a Student, I want to see school network information that is safe and public to members.

Acceptance Expectations

- Vendor roles do not see the school network.
- School profile and my profile modules remain removed.

13. Notifications and Audit Awareness

Purpose: Keep users aware of updates, messages, payment status changes, and pending tasks.

Roles: All approved roles according to module access.

Workflow

- 1 Notification badge shows unread items.
- 2 User opens relevant module to resolve the task.
- 3 System records important state changes such as approval, payment confirmation, and deletion.

User Stories

- As a Super Admin, I want pending approvals visible so that I can act quickly.
- As a School Admin, I want payment/request status messages so that I know what to do next.
- As a Vendor, I want request messages so that I can coordinate with the school.

Acceptance Expectations

- Notifications do not grant access to restricted modules.
- Users can only act where their role permits it.

4. Key Operating Lifecycles

Vendor Approval

- 1 Vendor applies
- 2 Status is Pending approval
- 3 Super Admin reviews
- 4 Super Admin approves vendor
- 5 Vendor gains marketplace access
- 6 Vendor products still require product approval

Vendor Purchase

- 1 School sends request
- 2 Vendor sends quote
- 3 School approves quote
- 4 Payment link is sent by Razorpay
- 5 Check payment confirms paid status
- 6 Vendor delivers
- 7 Request closes

Exchange Program

- 1 Draft
- 2 Pending Yarra Approval
- 3 Open
- 4 Applied
- 5 School Review
- 6 Matched
- 7 Ongoing
- 8 Completed
- 9 Feedback Submitted

Content Publishing

- 1 Super Admin or School Admin creates post
- 2 Audience and format are set
- 3 Teachers/students browse according to access
- 4 Vendors do not see content library

Event Management

- 1 Create event
- 2 Publish details
- 3 Users register/view
- 4 Owner or Super Admin edits/deletes

5 Linked registrations/payments are cleared on delete

5. Administration Checklist

- Confirm each new school has the correct School Admin email.
- Keep vendor applicants pending until documents, category, and offer are reviewed.
- Approve vendor products only when school-facing description, price, and stock are clear.
- Use Check payment after Razorpay payment link is paid before marking marketplace orders delivered.
- Review exchange requests before making them open to other schools.
- Use role switching carefully; users only see modules allowed by their current role.
- Regenerate this PDF after major module changes by running `python scripts/generate_user_manual.py`.
